

# Skull Comparison and Analysis Lab

## Part 2: Race

# Step 2: Race

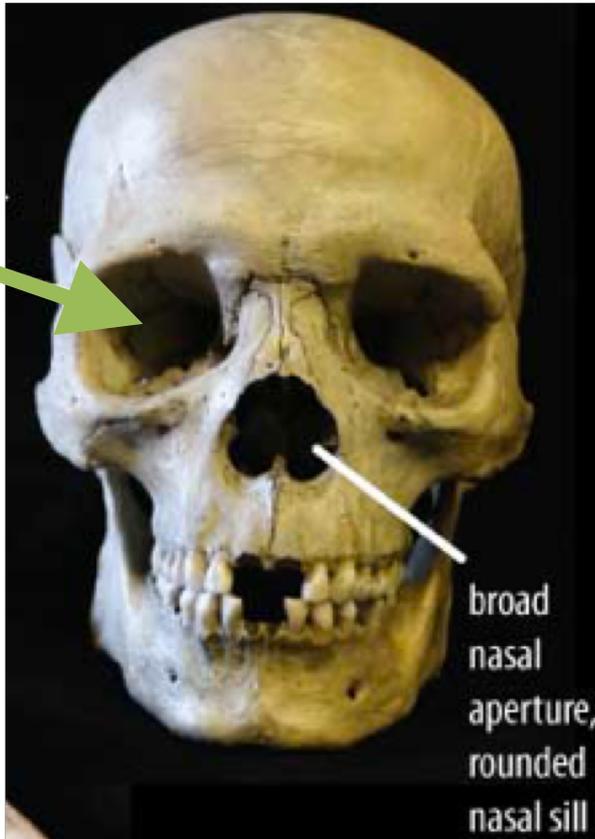

- ❑ Observe the skull and each skull feature listed
- ❑ Fill in Table 2 for Race in your lab packet
- ❑ Look at the following images to compare the 3 major racial categories

# Race

Forensic Anthropologists recognize main three racial groups

1. European (European, Middle Eastern and East Indian descent)
2. African (African, Aborigine, and Melanesian descent)
3. Asian (Asian, Southeast Asian, Native American (north, central, south), and Polynesian descent)

# Orbit Shape

**African –  
Rectangular  
Orbits**

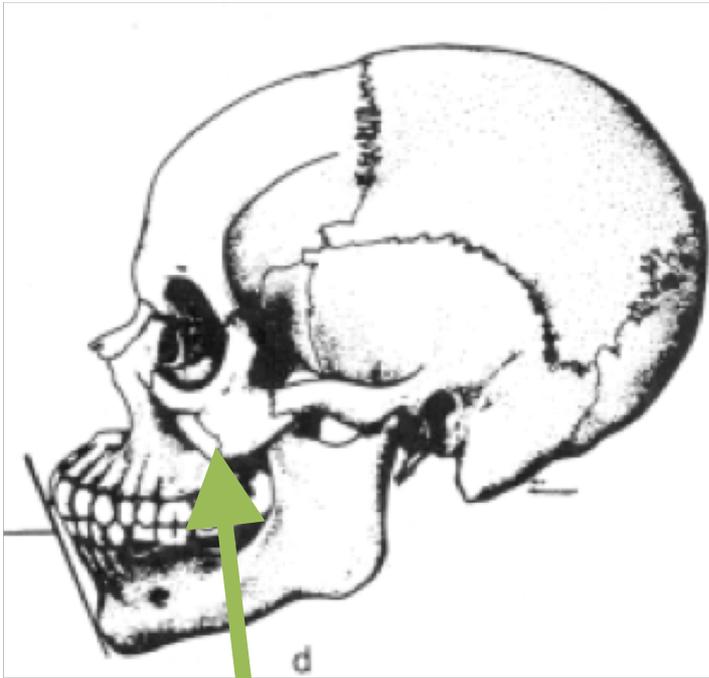

**Asian –  
Circular or  
Round Orbits**

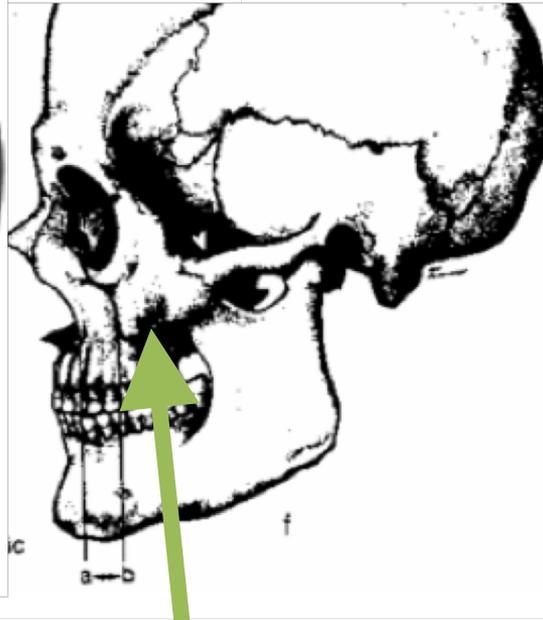

**European – Oval  
Orbits**

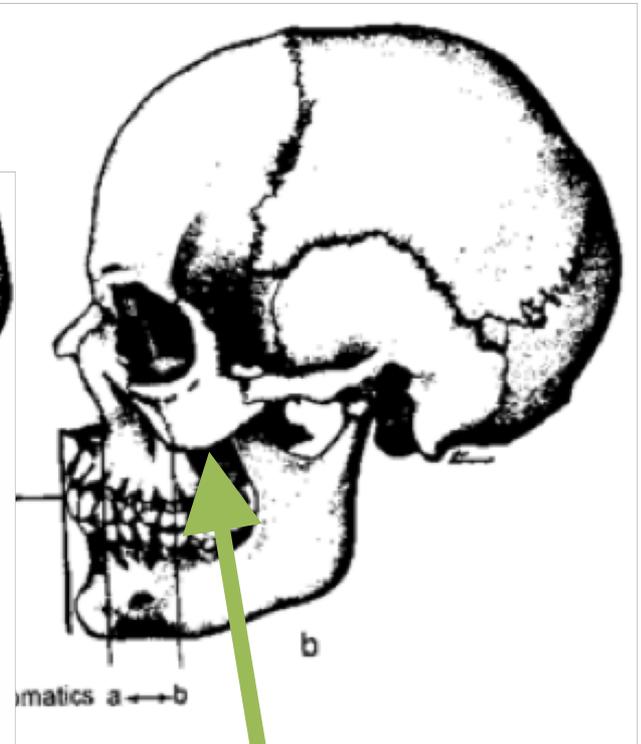

# Zygomatic Protrusion

**African –  
Smaller and  
more  
depressed**

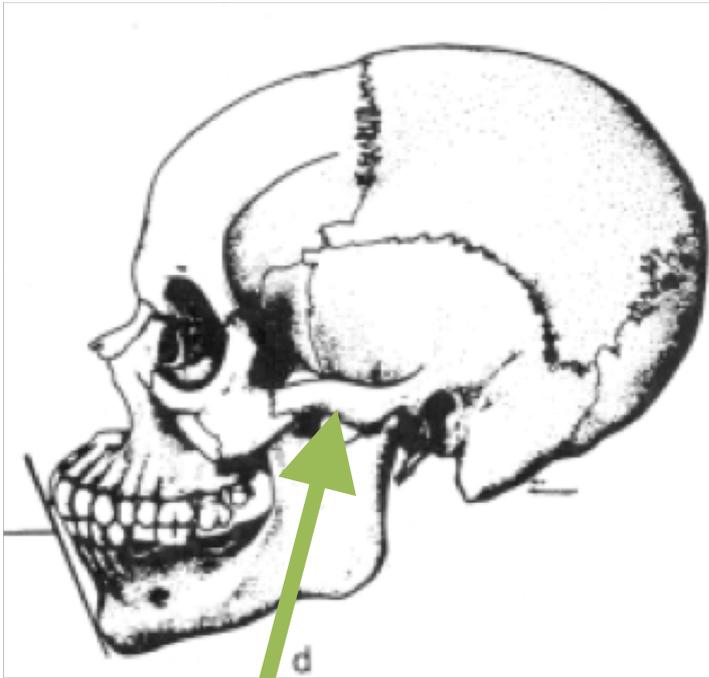

**Asian –  
Extends  
forward**

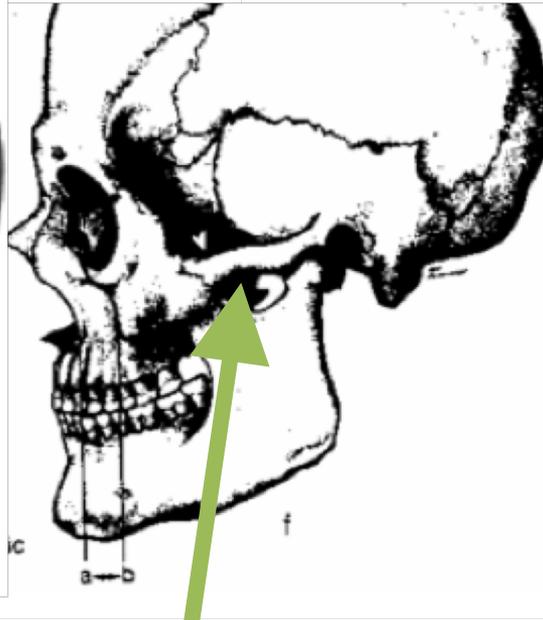

**European –  
Larger and more  
depressed**

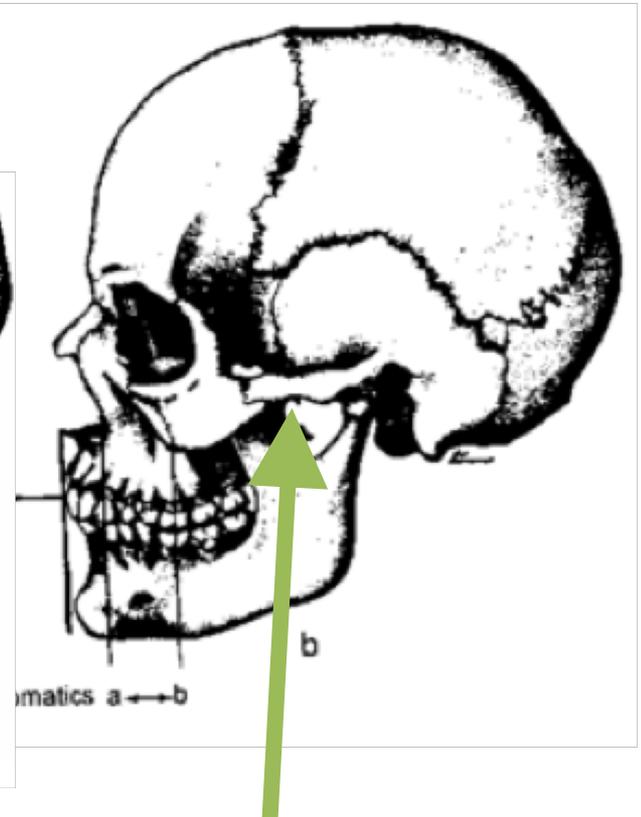

# Zygomatic Arch

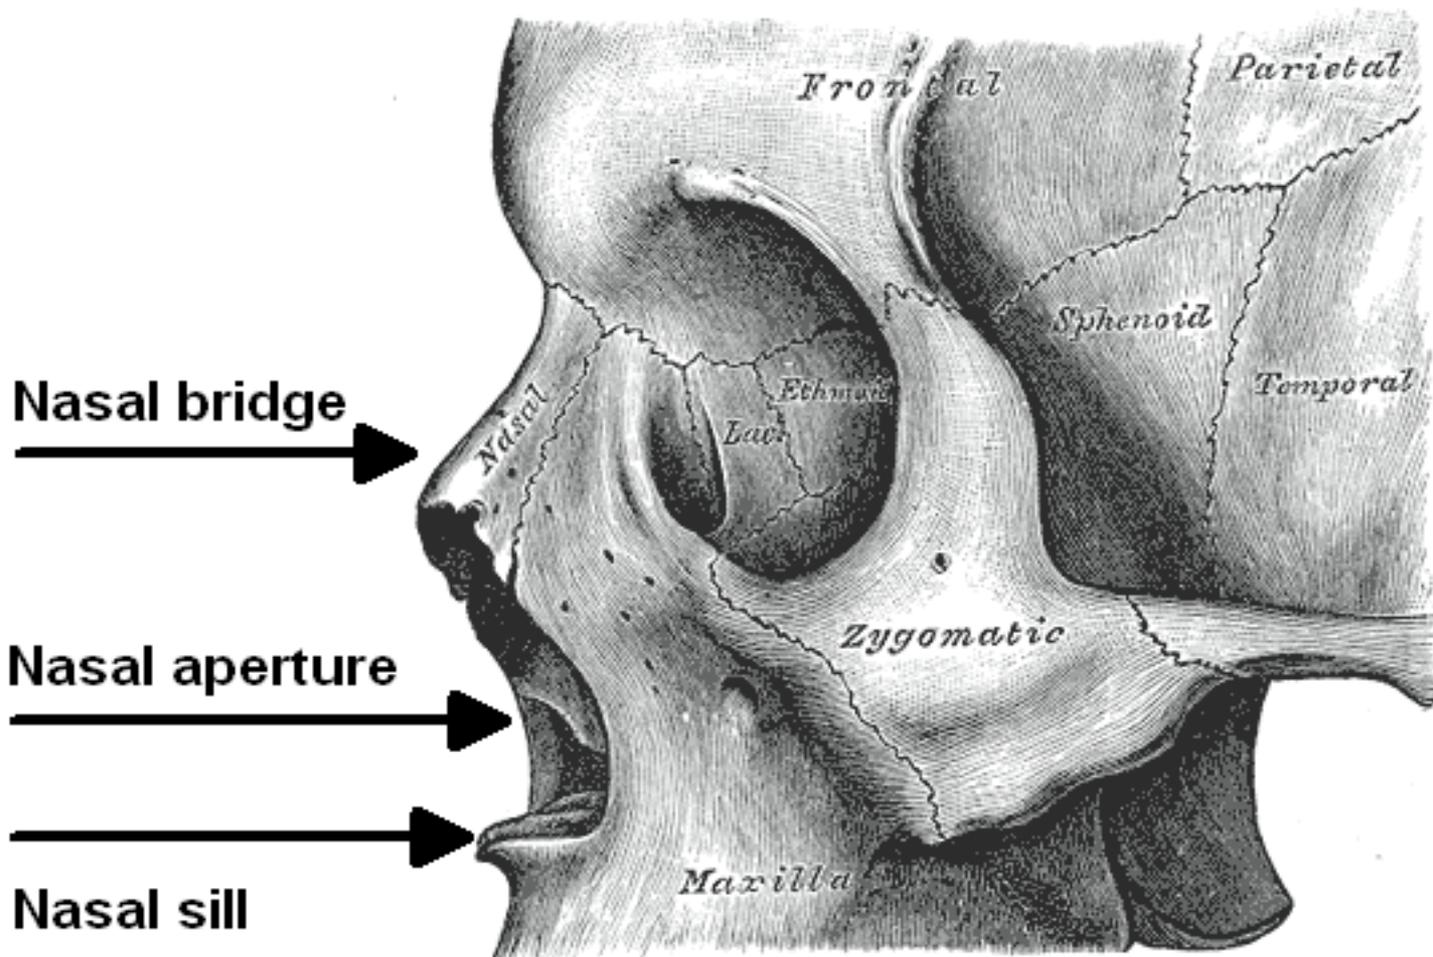

**African –  
Shorter and  
wider**

**Asian – Wide  
and prominent**

**European –  
Narrow**

Nasal bridge

Nasal aperture

Nasal sill

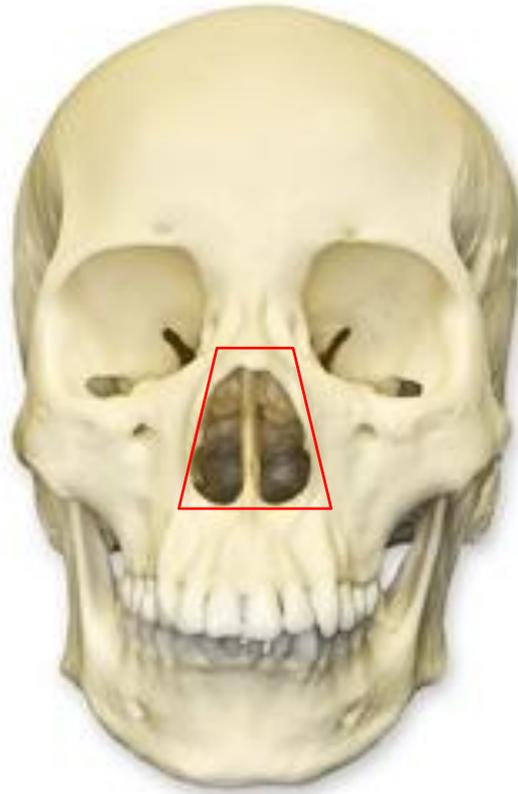

# Nasal Bridge and Aperture

**African**

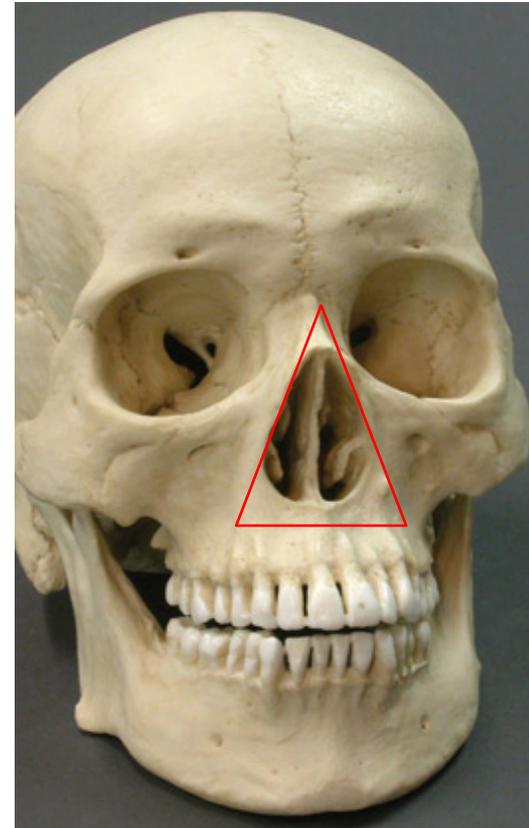

**Bridge:** “semicircle shape”  
wide no arch  
**Aperture:** Wide and short

**Asian**

**Bridge:** “tower shape” narrow,  
parallel, slightly arched  
**Aperture:** Flared at base

**European**

**Bridge:** “tent shape”  
narrow and arched  
**Aperture:** Narrow and  
high

# Nasal Sill

**African –  
Intermediate  
Angle**

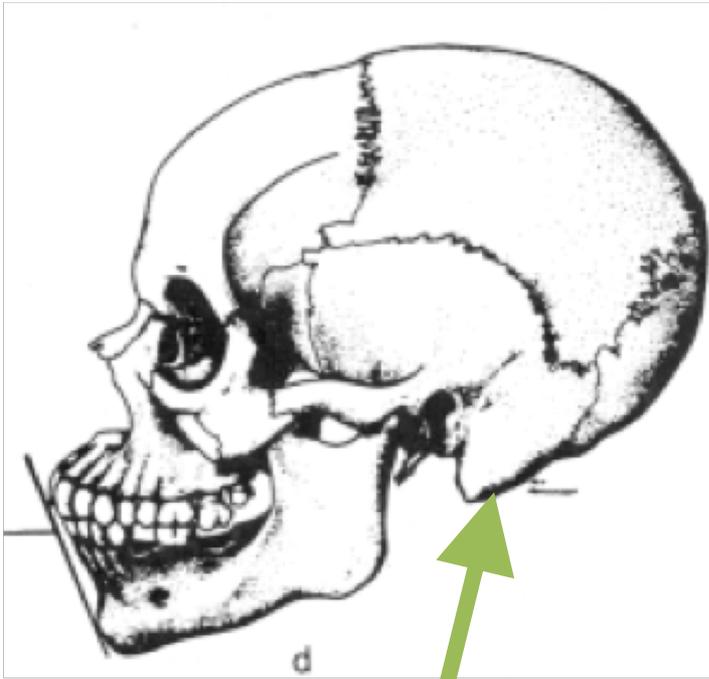

**Asian – Little  
to no angle**

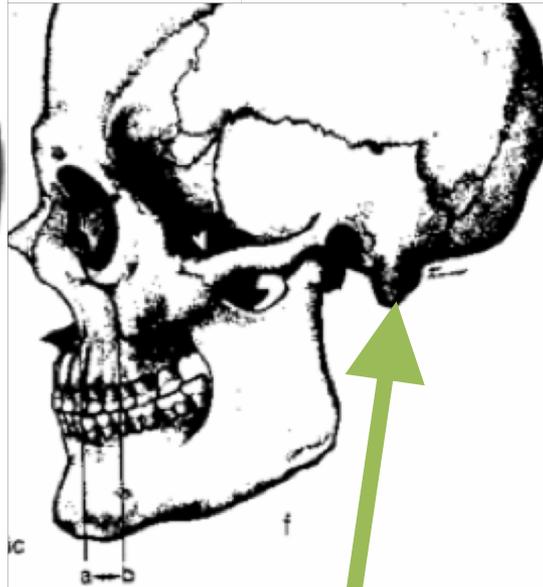

**European –  
Sharp Angle**

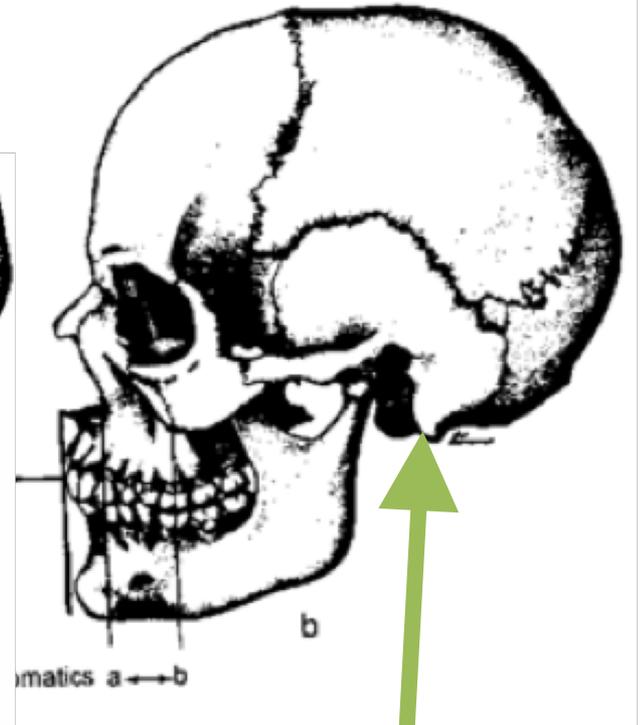

# Mastoid Process

**African –  
Wider**

**Asian – Shorter  
Projection**

**European –  
Narrow and  
pointy**

# Prognathism (forward extension of the maxillary bone)

**African –  
pronounced**

**Asian –  
Moderate**

**European – Little  
or absent**

# Skull Index Ratios

1. Nasal index =

**Nasal width/ nasal height X 100**

**(Use caliper for both)**

2. Facial index =

**Height of face/ width of face X 100**

**(Caliper for height and slider for width)**

3. Cranial index =

**Width of cranium/ length of cranium X 100**

**(Use osteometric slider for both)**

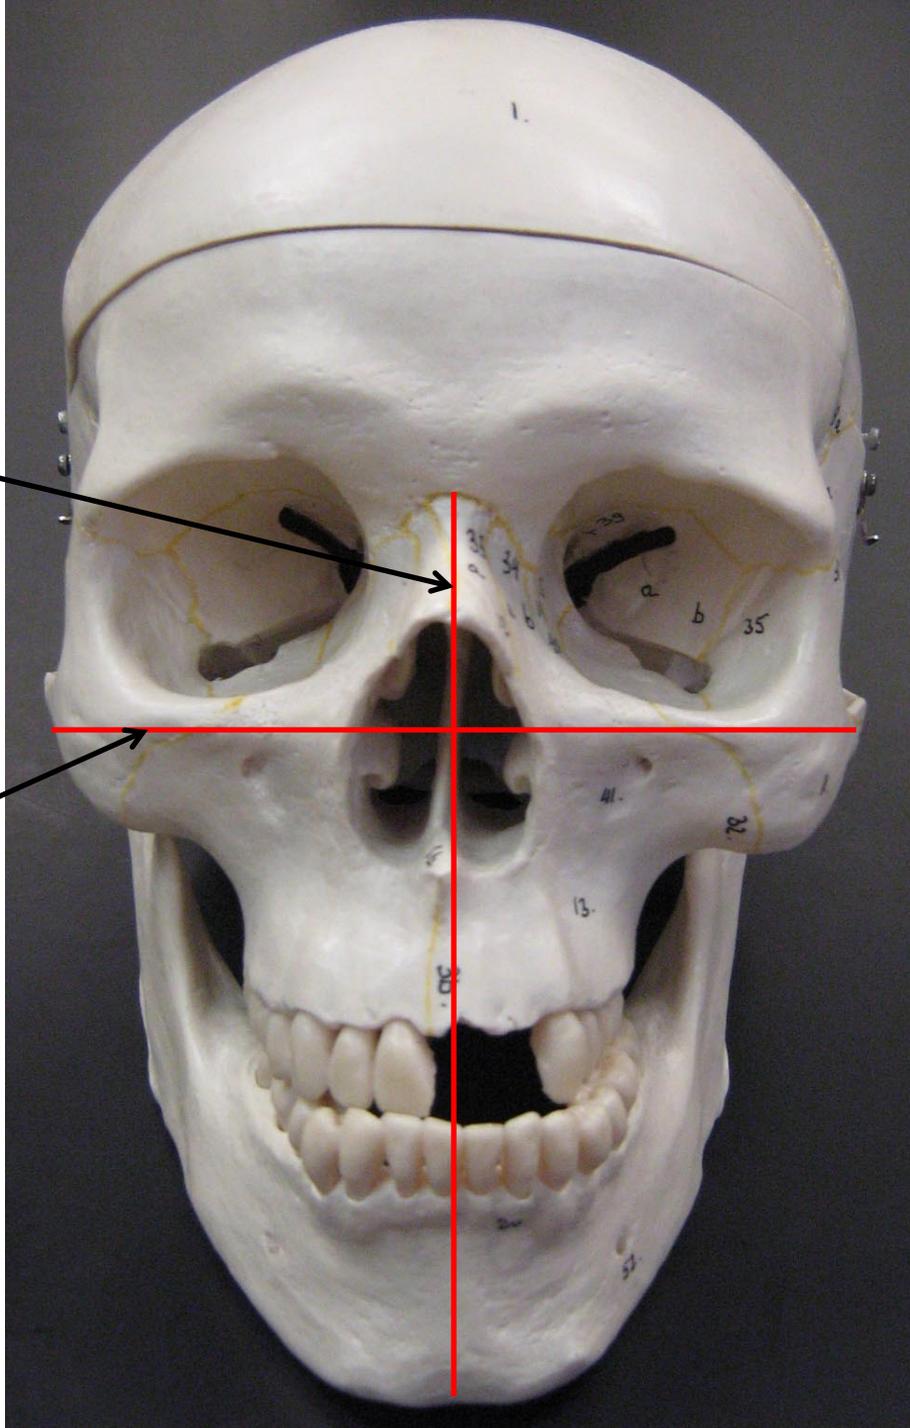

# Facial Index Measurements

## Face height

(from top of nasal bone to bottom of chin)

## Face width

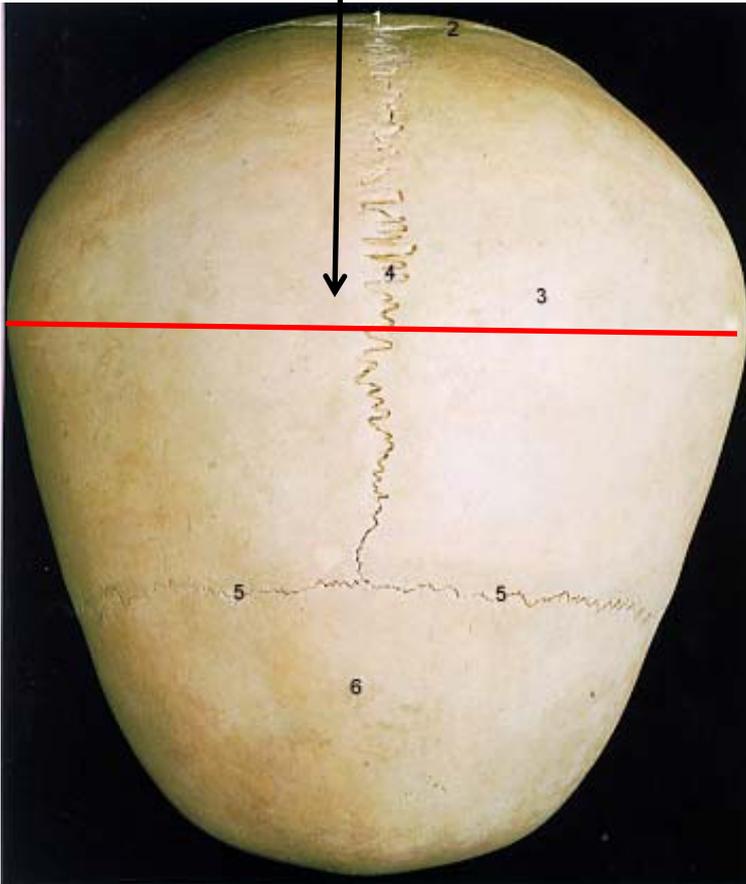

(from zygomatic bone to zygomatic bone)

# Cranial Index Measurements

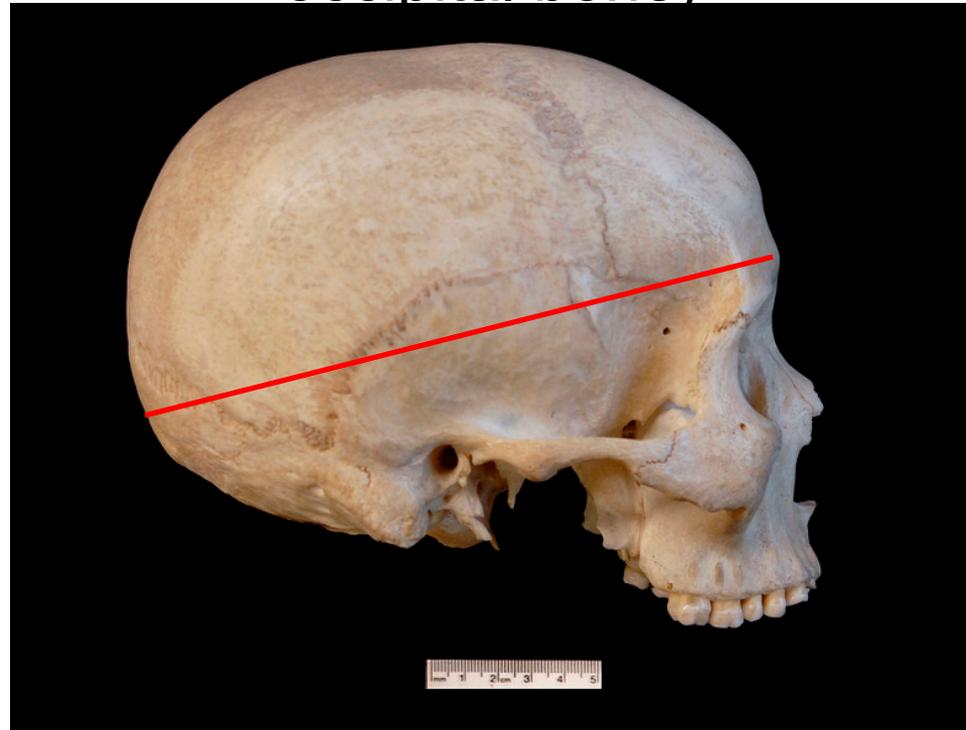

## Cranium width

(widest part of cranium)

## Cranium length

(from the very front of the frontal bone to the very back of the occipital bone)

<b>Characteristic</b>	<b>Asian</b>	<b>African</b>	<b>European</b>
<b>Nasal Index</b>	Between 48-53	Greater than 53	Less than 48
<b>Facial Index</b>	Between 85-90	Less than 85	Greater than 90
<b>Cranial Index</b>	Greater than 80	Less than 75	Between 75-80
